No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Description: fibrinogen cleaved by thrombin yields monomers that are polymerized into A; Pathway: blood coagulation
C; Superfamily: fibrinogen beta chain; fibrinogen beta/gamma homology; fibrinogen disulfic C; Superfamily: fibrinogen beta chain; fibrinogen beta setatus predicted csig.
C; Keywords: blood coagulation; coiled coil; glycoprotein; liver; plasma; pyroglutamic ac; F;1-30/Domain: (or 4-30 or 15-30) signal sequence #status predicted csig.

                                                                                                                                                                                                                             phospholipase C beta 3 - human
NyAlternate names: phospholipase c beta-3, phosphoinositide-specific
C;Species: Howo sapiens (man)
C;Decises: Howo sapiens (man)
C;Date: 15-Vul-1995 #sequence revision 21-Vul-1995 #text_change 17-Mar-1999
C;Accession: S52099; A56833; A56834
S;Lagercrantz, J.; Carson, E.; Phelan, C.; Grimmond, S.; Rosen, A.; Dare, E.; Nordenskjd
Submitted to the EMBL Data Library, September 1994
A;Description: Genomic organization and complete cDNA sequence of the human phosphoinosi
A;Reference number: S52099
A;Accession: S52099
A;Accession: S52099
A;Accession: Draininary
A;Molecule type: DNA

"Characterization of the soybean early nodulin cDNA clone GmENOD55.";
Plant Mol. Biol. 22:1167-1171(1993).
-! SUBCELLUIAR LOCATION: Peribacteroid membrane (Potential).
-! DEVELOPMENTAL STAGE: Expressed at early stages of nodule development, Maximal expression is seen in nodules from 14-day-old plants after which levels decrease.
-! INDUCTION: During nodulation in legume roots after Rhizobium infection, and after release of bacteria from the infection
                                                                                                                                                                                                                                                                                                                                                                                Eukaryota, Viriâiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnoliophyta, eudicotyledons, core eudicots, rosids, eurosids I; Fabales, Fabaceae, Papilionoideae, Phaseoleae, Glycine.

Wurch T., Lestienne F., Colpaert F.C., Pauwels P.J.;

Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: This is one of the several different receptors for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cyclase activity (By similarity).
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other SHT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Res. 31:793-799(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cyclase activity.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15.JUL-1998 (Rel. 36, Last sequence update)
